Fairness and the Development of Inequality Acceptance

Overview

Identification	mmskole
-----------------------	---------

Abstract

Inequality in payments may be seen as inherently unfair, or as appropriate when it reflects differential achievement. Using an economic exchange game, Almås et al. (p. 1176) mapped how judgments changed from 5th-grade students to 13th graders: Fifth graders expressed a preference for equal division of rewards, whereas the 13th graders tolerated unequal outcomes, as long as they had been provided with evidence of unequal inputs. That is, the younger children were strict egalitarians, but the older ones—perhaps as a consequence of exposure to a variety of achievement-based social activities, such as sports—tended toward meritocracy.

The data was collected in 2007.

Unit of Analysis	Individuals and decisions made by individuals
-------------------------	---

Scope & Coverage

Keywords	inequality, fairness
-----------------	----------------------

Countries	Norway
------------------	--------

Geographic Coverage

Bergen, Norway

Universe

School children 5th to 13th grade in Bergen, Norway.

Producers & Sponsors

Primary Investigator(s)	Almås, Ingvild, NHH Norwegian School of Economics Cappelen, Alexander W., NHH Norwegian School of Economics Sørensen, Erik Ø., NHH Norwegian School of Economics Tungodden, Bertil, NHH Norwegian School of Economics

Sampling

Sampling Procedure

Random selection of schools in Bergen at each grade level included in the experiment.

Weighting

None

Data Collection

Data Collection Mode	Lab experiment, web interface.
